
Revolut

Business Case Study

Introducing

RiskShield

**“ Real-time Risk Monitoring for Smarter
Fintech Management ”**

“The Challenge”

Thousands of payments happen on Revolut, every second
But not every tap, swipe or transfer is safe

**“Fraud evolves everyday.
So must our defenses.”**

The *Risk Intelligence Team* at Revolut needed to
make sure fraud doesn't hurt their customers:

Risk Intelligence
Team

How do we
safeguard our
customers?

A large, irregular thought bubble with a black outline. Inside the bubble, the text "How do we safeguard our customers?" is written in a black, sans-serif font. Three small circles lead from the bottom of the bubble to the main body of the bubble.

“The Mission”

But why **the need to monitor risk in real-time?**

Simply because.....

✅ Fraudsters are clever.

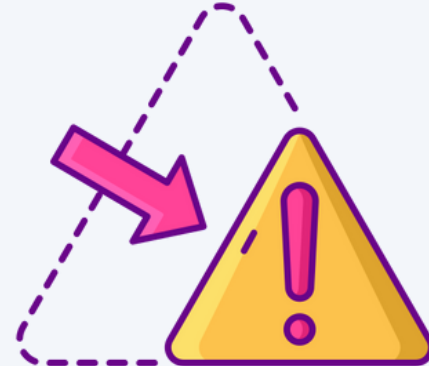

✅ They blend into normal transactions until its too late

The goal?

Detect them...Prevent them...Safeguard Customers

Instant Suspicious Activity
Detection

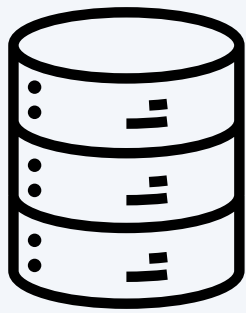

Minimize False
Alarms

Protect Users

“Crafting The approach”

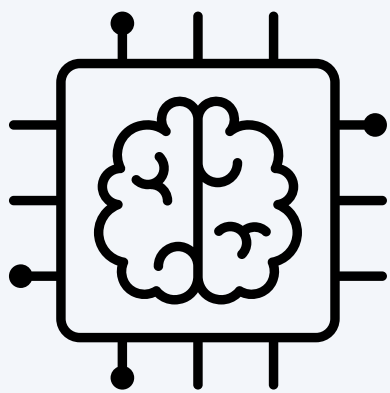

Here’s how the data actually moves:

Data

Clean messy data

Model
(RiskSheild)

Engineer Features

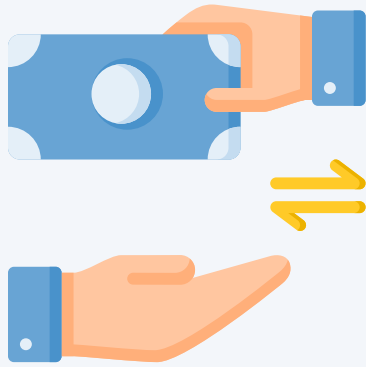

Detect Fraud Patterns

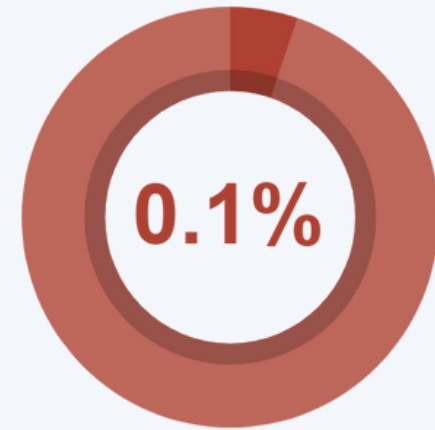

Risk Monitoring

“Zooming into the data”

As always the raw data whispered clues...
we had to listen carefully

*~ 280K Transactions
Analyzed*

*Only ~0.17% were
actually fraud*

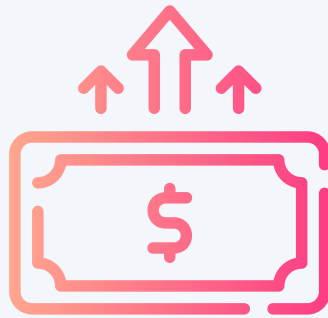

*Majority Repeat &
Trusted Retailers*

*Location & Timing
mattered*

“The Red Flags Emerge”

Behind every transaction...there's a hidden pattern

Unusually ***high-value transactions***

Rapid Fire payments in seconds

New Retailers + High Value + Online indicates risk

No chip + No PIN, but approved?

“Turning Data into Defense”

But how do we *use the data to build a smart filter that gets smarter everyday?*

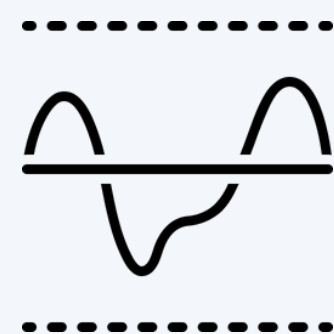

We built that smart filter...and named it **RiskShield** !

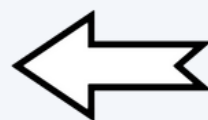

Spot patterns
(Learn what “Normal”
looks like)

Detect Anomalies
(Flag the unusual)

Optimize the Radar
(Focus on real threats)

Explain Why (Transparent
Insights, no black box)

“Real-Time Protection”

RiskShield doesn't just detect fraud
It prevents them in real-time

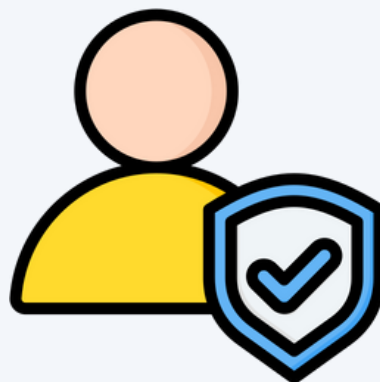

....But exactly how is it working?

System pauses
(Transaction looks suspicious)

Confirm or deny
(Cross-check with past behavior)

Customer stays safe without even noticing

“What changed & Why it Matters”

....But did all this change how Revolut works?

✓ *Instant Detection*

No more manual checks

✓ *Risk based prioritization*

No more one-size alerting

✓ *Real Time Protection*

No more delayed investigations

✓ *Smarter filters*

Reduced false alerts by 40%

“From Insights to Impact”

Key Takeaways

- It all comes down to **protecting people’s hard-earned money**
- **Transparency** builds Trust
- **Real-time monitoring** is the new gold standard.

What I’d do If I were hired

- Continuously **retrain models** for new fraud tricks
 - Build **live** dashboards for analysts
 - **Work** with Data Science team to fine-tune alert systems
-

Whether you're a Revolut user or just curious about Risks in Fintech... I hope this gave you a peek of how Revolut could fight financial crime in real-time

.....and if you've made it this far
Thanks for reading :)

More case studies coming soon
Until then, appreciate your time 🙌
